Shelley Hines • 254-681-3161 • [shines@dcgenvironmental.com](mailto:shines@dcgenvironmental.com) • [dcgenvironmental.com](http://dcgenvironmental.com)

## Core Competencies

### Asbestos Management Services

Asbestos Management Services is designed to protect and promote the physical and environmental health of all people from asbestos. We strive to prevent unnecessary exposure of the public to asbestos in workplaces and buildings and to assure proper disposal of asbestos.

### Asbestos Consulting / Inspections

Asbestos inspections/surveys are required for your protection. The asbestos inspection will help minimize your economic liability and health risks to occupants in your building or on the job site. Secondly, by obtaining an asbestos survey early in the process of a renovation or demolition of a project, the client will be able to avoid costly schedule delays of unforeseen asbestos hazards. We manage the process of performing the inspection and if asbestos is found, writing the scope of work for the abatement contractor to follow, assist with contracting an abatement company if needed, air monitoring during the abatement process and clearance testing to ensure the job was done correctly.

### Mold Consulting / Indoor Air Quality Services

DCG will provide services for all your Mold Consulting/Indoor Air Quality needs. DCG will provide written reports on the identification of the results of the sampling, will meet with the client to discuss the methods of remediation that are available to eliminate that problem, assist with the bids of abatement contractors if needed and provide post remediation clearance testing to make sure the job was done correctly. DCG will act as the owner's representative to make sure that all costs are kept to a minimum and the owner's liabilities are protected.
